

Partial Update Opportunity via PATCH

Created by	 Ankit Jain
Category	

1. Problem Statement / Use Case

Scenario: External deal-tracking dashboard sends partial updates (stage, close date) to Salesforce Opportunities.

2. REST Endpoint

```
PATCH /services/apexrest/opportunities?id={opportunityId}
```

- Opportunity Id is passed as a query parameter (`?id=006...`)
- Query parameters are accessed via `RestContext.request.params.get('id')`

3. Apex Class

<https://github.com/techjourneywithankit/Udemy-Integration-TJWA/blob/main/force-app/main/default/classes/OpportunityRestService.cls>

4. Sample Request Body

```
{
  "requestBody" :
  {
    "StageName": "Closed Won",
    "Amount": 50000
  }
}
```

Only include the fields you want to update. Absent fields remain unchanged.

5. Sample Response

Success (200):

```
{
  "success": true,
  "message": "Opportunity updated successfully.",
  "recordId": "006xx000001abcDEF"
}
```

Missing Id (400):

```
{
  "success": false,
  "message": "Opportunity Id is required as a query parameter (?id=...).",
  "recordId": null
}
```

Not Found (404):

```
{
  "success": false,
  "message": "Opportunity not found with Id: 006xx000001INVALID",
  "recordId": null
}
```
