

Welcome Rest Service

Created by	 Ankit Jain
Category	

1. Problem Statement / Use Case

Scenario: Your company wants to verify that their Salesforce org can expose a REST endpoint to external systems. Before building any complex integration, the team wants a simple "health check" endpoint that external systems can call to confirm connectivity.

Why business needs this:

- Confirm the Salesforce org can expose REST endpoints
- External systems can reach Salesforce
- Basic plumbing works before adding business logic

2. REST Endpoint

```
GET /services/apexrest/welcome
```

- `/services/apexrest/` — Standard base path for all custom Apex REST endpoints

- `welcome` — Custom URL mapping defined in the class

3. Apex Class
