

API Key Based Authentication

Created by	 Ankit Jain
Category	

Scenario

<https://api-ninjas.com/>

Integrate with Ninja API using API key based authentication to get the quotes from below endpoint

<https://api-ninjas.com/api/quotes>

Add External Credential

Setup → Named Credentials → External Credentials tab → New.

Label: `API Ninjas Auth`

Name: `API_Ninjas_Auth`

Authentication Protocol: **Custom**

Save.

Now I need to add a Principal. On the External Credential detail page, find the Principals section, click New.

Principal Name: `API_Ninjas_Principal`

Identity Type: Named Principal

Save.

Custom Header

Go back to the External Credential (`API Ninjas Auth`). Find the Custom Headers section. Click New.

Header Name: `X-API-Key`

Header Value: `{!$Credential.API_Ninjas_Auth.ApiKey}`

Save.

Named Credential

Setup → Named Credentials → New.

Label: `API Ninjas`

Name: `API_Ninjas`

URL: `https://api.api-ninjas.com`

External Credential: `API Ninjas Auth`

Generate Authorization Header: **unchecked**

Allow Formula Fields in HTTP Header: **checked**

The Apex Class
